

Kursrapport – Akademin för textil, teknik och ekonomi

Kursens namn: Life Cycle Assessment	Ladokkod: TK571C
Antal högskolepoäng: 5	Period (ex P1 2018): P1 2018
Inom program alt. fristående kurs: Masters in Resource Recovery	

Kommentar kring svarsfrekvens i studentvärderingen

2 groups of about 5 students each (total 15 students in course) answered a part-time assessment given in the last lecture and 3 students (perhaps the same students) answered the assessment in Pingpong.

Analys av:

Studenternas resultat och prestationer

All students passed the LCA project – some after making additions or additional explanations.

All students passed the written examination – 4 with grade E, 4 with grade D, 4 with grade C, 2 with grade B and 1 with grade A.

Students that take this course are, in general, very motivated. Many have come to Sweden to study. It is therefore not surprising that the students obtain good results.

Innehåll, undervisningsformer och examination

Based on the part-time assessment, the students thought that the compendium, the discussion of the case study and the example examinations were very helpful. They also thought that the LCA projects were nice. Some students want a better case study and others wanted a second case study for comparison.

Both groups of students thought that we spend too much time on training LCAs.

Despite many warning from the teacher (these are the students' words) it is easy to underestimate the time needed for the LCA project. The other group wanted a longer time for the project.

The answers given in the Pingpong course evaluation (3 students) support the description given above.

Forskningsanknytning

The teachers use LCA as a tool in their research. The compendium (written by the teachers) uses examples from their recent research to explain concepts. There is also a lecture devoted to research questions and debates (e.g., in methods for allocation) in this research field.

Eventuella förslag till förändringar

Perhaps spend less time doing LCA exercises.
