## Analys

Even though the beginning of the course start there were some misunderstanding between the lecturers and students - on group vs personal tasks, log books, etc. - during oral communication with students they expressed high level of satisfaction and interest in the content of the course. I believe that the starting miscommunication happen due to several simultaneous occurrences:

1. the course is completely changed and as such run for the first time
2. the course team, lecturers and examiners were also for the first time in the new designed course.

However, the results, student handouts were quite good which gives a positive signal to the whole course content.

Below I will comment students feedback even though there were only 15% of respondents.

### According to the goals for this course the students should, after completion of the course, be able to:

demonstrate knowledge and understanding of fundamental concepts, theories and methods in interaction design,

demonstrate abilities to plan and implement basic investigations of target user groups and their needs,

demonstrate abilities to plan and implement basic investigations of users' interactions with digital resources or prototypes for these,

demonstrate abilities to analyse empirical material and develop prototypes for digital services,

and be able to motivate and present arguments in favour of development of interfaces and functionalities based on established theories and principles of interaction design.

**Lärarkommentar:**

Students seem to be up to a great extent satisfied with their demonstrated knowledge.

Teaching has been carried out through discussions in Ping Pong and through online lectures . The teaching has contributed to my learning and helped me reach the learning goals.

Max antal val: 5

**Lärarkommentar:**

Majority of the students agree that teaching have helped them reach the learning goals.

The course literature has been helpful for my learning.

#### Lärarkommentar:

Students show quite high level of satisfaction with their teachers.

There has been a clear connection between the course content and illustrative examples from the research field.

Alternativ	Strongly disagree	Disagree	Neutral	Agree	Strongly agree
Fördelning	40%	0%	0%	60%	0%

Max antal val: 5

#### Lärarkommentar:

There is 60% of those who agree vs 40% against a clearlink between the course content and illustrative examples from research field. This should be further developed

In average, how many hours per week have you used for course work?

5 av 32 har svarat (15%)

Max antal val: 5

**Lärarkommentar:**

I would say that students are in majority satisfied with the distribution of the workload.

Examination has been conducted through written assignments and a course project/report. The assignments correspond well with the course goals.

5 av 32 har svarat (15%)

Max antal val: 5

#### Lärarkommentar:

The majority of students have read the course literature which is great.

There is a clear connection between the course and the professional activities the course serves as a preparation for.

Fördelning	0%	0%	20%	80%	0%
Antal	0	0	1	4	0

5 av 32 har svarat (15%)

Max antal val: 5

#### Lärarkommentar:

Students agree that the course is well connected to the professional activities in the field.

Is there anything considering the course goals, format and assignments that you think the course has lacked?

#### Fritextsvar:

Lack of plan and wrong instruction

The course was very interesting and I enjoyed getting some insights to a - for me- totally new field. A bit of a drawback for me was that especially in the beginning the organisation of the course was poor and it was very difficult to actually find out what the assignments really were and how they need to be conducted. Everything was explained in the end and people in charge were very nice but the whole course would have been more enjoyable without confusions throughout.

2 av 32 har svarat (6%)

#### Lärarkommentar:

yes, due to the fact that we all arrived new to a newly designed course caused confusion in the beginning of the course. The course design is quite complex and differs from other courses. Therefore both lecturers and students were confused in the very beginning. this was fastly sorted out. Still, we should work more on clearly communicating the whole course in the beginning.

Do you have any suggestions for how the course can be generally improved concerning goals, content, assignments, teaching, etc?

**Fritextsvar:**

There was quite a big misunderstanding regarding whether the assignments were based on group or individual work and the form of the oral presentation. Even teachers were giving us different instructions during the course. That was confusing and somehow distracting and discouraging.

See earlier answer

**Lärarkommentar:**

Yes, some task descriptions were not made to highlight to the students if the task is a group task or the individual one. We will work on that to highlight that both in visual, oral, and personal communication.

Please write your experience in using the online learning management system, Pingpong, and how it could be further improved to facilitate and support learning

**Fritextsvar:**

In my opinion pingpong works fine. The only uncertainties are seminars in adobe. There always seems to occur some problems.

I feel that Ping Pong does not support group work very much so we rather decided to use shared documents on Google docs for our group project instead.

2 av 32 har svarat (6%)

**Lärarkommentar:**

The tools we use are not so easy and reliable as we would all like them to be.

What did you find most and less interesting about the course?

**Fritextsvar:**

I really liked the group project - designing our own prototype. Even though it was difficult sometimes because all of our group members were based in different countries, it was very interesting to work together on the project and to see everyone's ideas and ways of thinking and working.

I liked most the design project and getting to know this process. The seminars with petter were very helpful. I did not like so much the really long recorded lectures.

2 av 32 har svarat (6%)

**Lärarkommentar:**

Unfortunately, we have only two replies on this question. One can argue that students appreciate the hands on team dynamic, working across physical borders, cultural borders, come to solution for online cooperation and Log Book reporting. We will

continue developing online cooperation and hands on approach in the future.
